The Prologue or Introduction.

IN GEORGE the Prince of *Wales*, we now behold
Each Grace the Poets gave their Gods of old.
If in your Dawn, bright Prince, you charm us so,
What will your full meridian Merit do!
Ev'n now the Wonders of your Youth combine,
To make our Transports and our Judgments join.
From your first Conduct we are taught to trace
The treasur'd Blessings of our future Race,
And see *Britannia's* endless Fame design'd,
In every Virtue of your spotless Mind.
What Joys obsequious on our Wishes wait,
When Heaven thus gives our ever envy'd State,
A Prince so lovely, and a King so great!
Our matchless Monarch not consults alone
The present Glories of his awful Throne,
But makes Posterity his Debtor too,
For all the Virtues he transmits to you.
The Sea that brought your Ancestors to Shore,
Ne'er brought our Isle a nobler Gift before.
Well with our Wishes did the Waves accord,
And dutifully bore their future Lord;
Whose Mind bright Wonders for our Hopes prepare,
Prosperity in Peace, or Fame in War.
If Peace, no longer by ill Fate withstood,
Permits you here to be serenely Good,
Your fam'd Resemblance to your Royal Sire,
The firmly faithful *Britons* shall admire:
And, while the Beauties of your Bloom they bless,
Shall, with the Nations all around, confess
That half the Virtues your few Years unfold,
Have deify'd a hundred Kings of old,

Concluding the Historical Account of the Horrid Popish, High Church, Jacobite Plot, for murdering King William III. and to procure a French Invasion, discovered in Feb. 1695-6.

WHEN Mr Porter sent the Musquetoon to Mr Pendergrafs, which would carry 6 Bullets, Mr King desired him when he shot at His Majesty, not to be afraid of breaking the Glasses.

Mr Charnock returned some time before from France with the unwelcome News that the French King could not spare so many Men as the Jacobites desired. But Sir George Barclay coming over soon after revived their Hopes; and all the Assassins being come to London, the design of killing the King was imparted to them, which some were a little startled at; but all Scruples of Conscience were removed by King James's Commission, and their plentiful Prospects of Wealth and Honour. Some proposed to kill the King at Kensington, by forcing his Guards in the dead of the Night. Others, as he came to St James's Chapel, to which purpose 40 Men well armed were to assault the King's Guards, which did not usually exceed 25; while 6 Men on Foot should shut Hyde Park-Gates, and the rest assassinate His Majesty. Others proposed to kill the King as he returned from hunting in a narrow Lane. At last they fixed upon a Place at Turnham Green for the Execution of this barbarous Villany, which (if Heaven had not prevented) might have proved fatal to all Europe. The Day appointed for acting it was Feb. 15th 1695-6; but it pleased God that His Majesty did not go abroad that Day. For Mr Pendergrafs being so struck with Horror at the Design, even took a full Resolution to preserve His Majesty's Life, and discover the Conspiracy, which he did accordingly the Day before. After which M. de la Rue, Capt. Porter, Mr Bertram, Mr Harris, Mr Bois, Capt. Blair, Mr Goodman, &c. made a full Discovery of this bloody Design: And many of the principal Conspirators being seized, were upon full Evidence tried and convicted, and executed for the same, namely, Charnock, King, Keys, Perkins, Freind, Rookwood, Cranburn, Lowick, and Fenwick. So this barbarous Plot was discovered *Laus Deo*

A Table of the Moon's Age for every Day throughout this present Year 1760. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above mentioned in it are shewed by Inspection.

Explanation of this, and the following Table.
First find the Month in the Head of the Table, and the Day in the First Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above mentioned, by Inspection.

Example. January the 10th, the Moon is 22 Days old, and over-against 22. in the second Column is 8 Hours 36 Min. which is the Time of High Water at London, Timmoub, Harle- col, Amsterdam, &c. &c. Et sic de ceteris.

A general Tide-Table, with the Moon's Age, and over-against it you have the Time of High Water at the Places above mentioned, by Inspection.
Enter this Column with the Moon's Age, and over-against it you have the Time of High Water at the Places above mentioned, by Inspection.
A general Tide-Table, with the Moon's Age, and over-against it you have the Time of High Water at the Places above mentioned, by Inspection.
A general Tide-Table, with the Moon's Age, and over-against it you have the Time of High Water at the Places above mentioned, by Inspection.

A Table of Terms and Returns, for the Year of our Lord 1760.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Effoign Days.		Exc.	Ret.	App.	D. W.
In eight Days of St Hilary,	Jan. 20	21	22	23	Wedn.
From the Day of St Hilary in 15 Days,	27	28	29	30	Wedn.
On the morrow of Purif. of bl. V. Mary, Feb. 3	4	5	6	7	Wedn.
In eight Days of the Purif. of bl. V. Mary,	9	11	11	12	Tuesd.

Easter Term begins April 23, ends May 19.

From the Day of Easter in 15 Days,	April 20	21	22	23	Wedn.
From the Day of Easter in 3 Weeks,	27	28	29	30	Wedn.
From the Day of Easter in 1 Month,	May 4	5	6	7	Wedn.
From the Day of Easter in 5 Weeks,	11	12	13	14	Wedn.
On the morrow of the Ascension,	16	17	17	19	Mond.

Trinity Term begins June 6, ends June 25.

On the morrow of the holy Trinity,	June 2	3	4	6	Frid.
In eight Days of the holy Trinity,	8	9	10	11	Wedn.
From the Day of holy Trinity in 15 Days,	15	16	17	18	Wedn.
From the Day of holy Trinity in 3 Weeks,	22	23	24	25	Wedn.

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the morrow of All-Souls,	Nov. 3	4	5	6	Thurs.
On the morrow of St Martin,	12	13	14	15	Satur.
In eight Days of St Martin,	18	19	20	21	Friday
In 15 Days of St Martin,	25	26	27	28	Friday

N B. No Sittings in *Westminster-Hall* on *Ascension-Day*,
Midsummer-Day, and the 2d of *February*.

The *Exchequer* opens eight Days before any Term begins,
except *Trinity*, before which it opens but four Days.

Note, That the first and last Days of every Term, are the
first and last Days of Appearance.

Westminster-Hall, both good and bad doeth yield,
All are not Rooks that in the Temple build;
Some they are just, in such you may confide,
Who honest act. and will not take a Bribe,
Doubtless there are but where those Men do dwell,
By the astral Art, I vow I scarce can tell.

January hath XXXI Days.

CREATION, a Poem continued.

You, who the Mind and Cause Supreme deny,
Nor on his Aid to form the World rely,
Must grant, had perfect Wisdom been employ'd
To find, thro' all th' interminable Void,
A Seat most proper, and which best became
The Earth and Sea, it must have been the same.

February hath XXIX Days.

Thus we the Frame of Nature have exprest ;
 Now view the Earth in finish'd Beauty drest :
 The various Scenes, which various Charms display,
 Thro' all the extended Theatre survey.
 See how sublime the uplifted Mountains rise,
 And with their pointed Heads invade the Skies.

D.	☾	☿	♈	♀	♊	toofast	fourth	rises	
1	19					14 8	Morn.	4N31	The Aspects of this Month are not very many, but those there are is of a mild amicable Disposition; the Δ of the ☿ and ♂ in last Month denotes, that some Honour, Favour, and Preference, will be conferred on an eminent military Officer of Distinction. The Conjunction of ☿ and ♀ bodes Amity and Concord amongst Men of the first Rank, and one of the long Robe is crowned with Honour suitable to his Merit. The Conjunction of ♀ and ☿ promiseth Wealth and prosperous Voyages to Merchants and Tradesmen.

March hath XXXI Days.

How the high Cliffs their craggy Arms extend,
Distinguish States, and sever'd Realms defend ;
How ambient Shores confine the restless Deep,
And in their ancient Bounds the Billows keep ;
The hollow Vales their smiling Pride unfold ;
And rich Abundance do their Bosoms hold ?

April hath XXX Days.

Regard their lovely Verdure, ravish'd view
 The springing Flow'rs of various Scent and Hue.
 Not Eastern Monarchs, on their nuptial Day
 In dazzling Gold and Purple shine so gay,
 As the bright Natives of th' unlabour'd Field,
 Unverst in spinning, and in Looms unskill'd.

May hath XXXI Days.

See, how the rip'ning Fruits the Gardens crown,
 Imbibe the Sun, and make his Light their own.
 See the sweet Brooks in silver Mazes creep,
 Enrich the Meadows, and supply the Deep ;
 While from their weeping Urns the Fountains flow,
 And vital Moisture, where they pass, bestow.

June hath XXX Days.

Admire the narrow Stream, and spreading Lake,
The proud aspiring Grove, and humble Brake:
How do the Forest and the Woods delight?
How sweet the Glades & Openings charm the sight?
Observe the pleasant Lawn, and airy Plain,
The Fertile Furrows rich with various Grain;

July hath XXXI Days.

How useful All? how all conspire to grace
 The extended Earth, and beautifie her Face?
 Now see, with how much Art the Parts are made;
 With how much Wisdom are the *Strata* laid,
 Of sundry Forms, for sundry Ends design'd,
 Of different Weight, and of a different Kind;

August hath XXXI Days.

Here in their Beds the finish'd Minerals rest,
 There the rich Wombs the Seeds of Gold digest.
 Here in fit Moulds, to *Indian* Nation known,
 Are cast the several kinds of precious Stone;
 The Diamond here, by mighty Monarchs worn,
 Fair, as the Star that ushers in the Morn;

September hath XXX Days

There, Splendid by the Sun's embody'd Ray,
The beauteous Rubie does its Light display.
There Marble's various colour'd Veins are spread;
Here of *Bitumen* unctious stores are bred.
What skill on all its Surface is bestow'd,
To make the Earth for Man a fit Abode?

October hath XXXI Days

The upper Moulds, with active Spirits stor'd,
And rich in verdant Progeny, afford
The flow'ry Pasture, and the shady Wood,
To Men their Physic, and to Beasts their Food.
Proceed ye farther, and a Prospect take
Of the swift Stream, and of the standing Lake.

November hath XXX Days

Had not the Deep been form'd, that might contain
 All the Collected Treasures of the Main,
 The Earth had still o'erwhelm'd with Water flood,
 To Man an uninhabitable Flood.
 Yet had not Part as kindly staid behind,
 In the wide Cisterns of the Lakes confin'd.

December hath XXXI Days.

Did not the Springs and Rivers drench the Land,
Our Globe would grow a Wilderness of Sand;
The Plants and Groves, the Tame and Savage Beast,
And Man their Lord, would die with Drought oppreit.
Now, as you see the floating Element
Part loose in Streams, part in the Ocean pent,
So wisely is dispos'd as may conduce
To Man's Delight, or necessary Use.

PARTRIDGE, 1760.

A Table of some principal fixed Stars, with the time they Rise, South, and Set, either before or after the Seven Stars; as also their Colour, Magnitude, and Meridian Altitude, by which they may be readily discovered.

Col- our.	Alt.	Magn.	Names of the Stars.	Rise h m.	South h. m.	Sets h. m.
♂	53	1	Aldebaran or Bulls Eye	12 34	ca 48	ob 6
h 24	29	1	Left Foot of Orion	4 31	1 31	1 34
4 h	36	2	Middle * in Orions Belt	4 13	1 51	0 35
♂ ♀	15	1	Right Should. of Orion	9 23	2 8	0 8
♀ ♂	21	1	Syrius, the great Dog	6 41	3 1	0 48
♂	43	2	Procyon, the little Dog	5 33	3 53	2 7
h ♀	30	1	Heart of Hydra	8 33	5 41	2 44
4 ♂	51	1	Regulus, Lions Heart	7 29	6 21	5 16
♀	54	1	The Lions Tail, Deneb	8 42	7 54	7 7
♀ ♂	28	1	Virgins Spike	12 46	9 38	6 36
♂ 24	58	1	Arcturus	10 47	10 30	10 12
♂	12	1	Antares the Scorp. H.	17 36	12 39	7 42
h ♀	56	2	Bright * of the Vulture	17 38	16 3	9 27
♀ ♀	56	1	Fomalhaut	11 14	19 11	10 37
4 ♀	65	2	Head of Andromeda	10 42	20 19	2 50

THE brightest of the 7 *'s is of the third Magnitude, and hath 61 deg. of Meridian Altitude, and in Colour participates of the ♀ and ♂.

2. The fixed Stars all rise, south, and set, about 4 min sooner every Night than they did the Night before: this considered, the exact time of their Rising, Southing, and Setting, for any intermediate Night not herein noted, may be very easily deduced from these Tables, by Inspection only.

To know the time of the Rising, Southing, and Setting of any Star in this Table, for any Day required, it is but considering how many Hours and Minutes, that Star Rises Souths or Sets, either before or after the 7 Stars on that Day, and you will have your desire; observing that in this Table, a stands for after, and b for before.

Some further Remarks on the Division of the Heavens.

IN my last, was inserted some Remarks on the Division of the Heavens; in this I shall endeavour to prosecute that Subject a little further, and give some other Testimonies to prove that the Division of the Heavens commonly made use of, (and called the Rational way of Regiomontanus) to be both false and irrational, being not agreeable to the true and natural Motion of the Heavens; hence I hope no one can be angry with me for defending the Truth, but rather thank me for helping them to so easy a Remedy for their false Division. There are old Errors as well as old Truths, and the former generally rides the Fore-Horse. However, I will go on and give you further Proofs of it's Falseness, and also shew the ill Consequence of it in Practice.

Let us suppose the ☉ in 8° of Π Sub Lat. $51^{\circ} 32'$, his semidiurnal Arc there is $120^{\circ} 12'$, the third part of that is $40^{\circ} 4'$, this taken from $120^{\circ} 12'$, leaves it's Distance from the M. C. and is it's Distance from the Ascendant; when the ☉ comes to the Cusp of the 12th House, at which time there is 8° of Π on the 12th; but by the rational there is 15° of Π there, and how positive they are to Exactness when they work the Cusps of the Houses to Minutes and Seconds. Now let us see how Trigonometry will justify this Division by the diurnal Arc, 15 of $\times$ on M. C. and it's R. A. $346^{\circ} 5'$. As R. to the C. S. $46^{\circ} 5'$, so the C. T. $40^{\circ} 52'$ to the C. T. of $51^{\circ} 17'$: so the T. of $46^{\circ} 5'$ to the T. of 68° , which gives exactly 8° of Π on the 12th as before. I do intreat them that endeavour to justify Regiomontanus, to prove theirs by true Motion. He was a learned Man, but *Bernardus non videt omnia*. Again, let us take the ☉ in 22° of Υ , Sub Lat. $51^{\circ} 32'$ The M. C. 15° of $\uparrow$ to find the Cusp of the 12th House. The semidiurnal Arc of the ☉ there is $59^{\circ} 48'$, leaves the Distance of the ☉ from the 10th House $89^{\circ} 52'$ when he comes to the Cusp of the 12th, at which time there is exactly 22° of Υ on the Cusp of the 12th; but by the Rational there is but 15° of Υ , which is a very great Difference in so small an Arc, no less than 7° false; which

PARTIDGE, 1760.

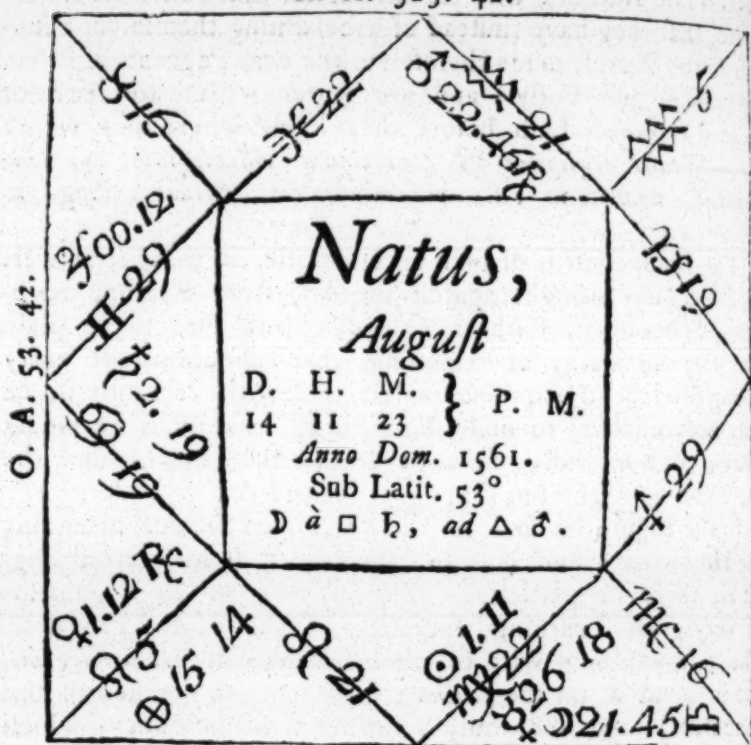

if it be well considered is certainly the ground of abundance of Errors in Directions in Nativities, which ought to be rectified. And the Method I take is by *Natural Motion*; not imaginary as theirs is, dividing nothing but Air. Now let us see here again, how Trigonometry will justify us in this Kind of Division. As R. to the C. S. of $46^{\circ} 5'$, so is the C. T. of $40^{\circ} 52'$ to the C. T. of $31^{\circ} 17'$. Again, as the C. S. of $74^{\circ} 47'$ to the C. S. of $51^{\circ} 17'$, so is the T. of $46^{\circ} 5'$ to the T. of 68° . This subtracted from 12 Signs, leaves 22° of ♊ on the Cusp of the 12th House as before; which by the Division of Regiomontanus hath but 15° . I think I need not say any more to expose the Falseness of it, for it is very visible in itself. I now come to shew the Mischief of this false Division in Direction, which is the principle Thing I aim at in what I do on this Subject.

Let us suppose the $\odot$ in 22° of ♊ on the Cusp of the 12th House by the true Division; and I will direct him to the Body of ♄ in 26° in ♈ S. L. and the Arc of Direction will be $43^{\circ} 44'$. Now let us direct the $\odot$ on the Cusp of the 12th in 22° of ♊ by their Division, to the Body of ♄ as before S. L. and see what Difference there will be; the Arc of Direction in their way will be $38^{\circ} 8'$ differing from the former $5^{\circ} 36'$, which will be almost 6 years. I hope they will all own this to be a vast Difference as well as a horrid Error in a Direction.

Again, let us take the $\odot$ in 1° of ♈ on the Cusp of the 12th House, and direct him to the Body of ♄ in 11° of ♈ by the true Division, and the Arc of Direction will be $42^{\circ} 1'$. Let us also work the same Direction in their way, and the Arc will be $36^{\circ} 30'$, differing 5° and a half. Take one Example more in Signs of long Ascension. Let the $\odot$ be in 15° of ♈ on the 12th as before, and I direct him to 20° of ♄ , and the Arc of Direction is $44^{\circ} 41'$. Then direct it in their way, and the Arc is $47^{\circ} 41'$, too great a Difference to be allowed in Direction; and so I will leave it to the Approbation of the Ingenious. And proceed next to give another Experiment in the genethliacal Part of Astrology.

THIS is the Nativity of that most learned Knight and Philosopher, Sir *Christopher Heydon*; the Author of that incomparable Defence of Judicial Astrology, written in answer to a Book published against Astrology, by Mr *John Chambers*: in which Defence, this learned Knight was so exact in his Responses, so satisfactory and full in his Arguments, so strenuous in his Proofs thereof, that when once Mr *Chambers* (who no question was a great Scholar) had seen and perused it, and found the same unanswerable, and his own Arguments so fully refuted and retorted, he for very grief died. Divers others since Mr *Chambers's* Time, have pretended to answer this unanswerable Work; as *Vicars, Rowland*, and several

PARTRIDGE, 1760.

Several late Authors, who all have so far failed in their Enterprize, that they have (instead of proclaiming themselves Scholars to the World) made themselves the very Pageants of Envy, Ignorance, and Folly; and are gotten within the reach of learned Cardan's Lash before they knew where they were:

— *Stulti negligunt & contemnunt Astrologiam, qui contradicit, ambitiosus est; qui maledicit, fatuus.* Seg. 1. Aphor. 24.

The Book itself is of such excellent use, in that, it answers all Objections brought against the Art, from Reason, Scriptures, Schoolmen, Fathers, Councils; and that in so plain and familiar a way of reasoning, that I should advise every young Student to acquaint himself therewith: that by it, he may be enabled to understand, first, what it is he would study; and secondly, how to defend the same against the malicious and ignorant Oppugners of the Art.

In the Figure we find II (the latter part thereof) ascending the Horoscope; and ♀, Lord thereof, in ♀ his greatest Dignities, there in platick Δ to ♀, and * to ♀: Arguments of very great Learning, Ingenuity, Sagacity, and Prudence. The ♀ in ♀, in ♀ with that noble Star called *Spica Virginis*, and in Δ to ♀ on the *Medium Cali*; which denoted in this honoured Native, not only a sharp and active Fancy, which quickned him in his Studies; but gave him great Courage and Resolution, &c. &c. For you must understand, he was as well a Soldier, as Scholar; and both by Sword and Pen did purchase himself such lasting Honour and Fame, that Time will never wear out.

This worthy Native died in the Year 1620, a little before his 59th Year of Age began: he had then operating by Direction the ♀ to the 8 of ♀, both with and without Latitude, and also the Ascendant ad 8 *Martis cum Latitudine*, fatal Directions. The Reason of my reprinting this Geniture, is to perpetuate the Merits of so honourable and worthy a Person. *Vide Gad, Col. Gen. p. 160.*

Judicium,

PART II D G E, 1760.

Judicium Astrologicum, pro Anno 1760.

Of the Winter Quarter,

WHICH begins on *Saturday* the 22d Day of *December* 1759, at 28 Minutes past 1 in the Morning, when 20 Degrees of *Cancer* culminates, and the 15th Degree of *Libra* ascends; the Planets are all above *terram*, except *Mars*, who is posited upon the Cusp of the 12th House, where he is in *Sextile* to *Venus* in the 2d, in *Trine* to *Mercury*, *Jupiter*, and the *Moon* in the 4th, and in *Opposition* to *Saturn* in the 5th; the *Moon* is in *Conjunction* with *Jupiter* and *Mercury* in the 4th, and also in *Sextile* to *Venus*. This is a mild pacifick Ingress, and will in some Measure soften and alleviate the evil Genⁱ of the Times; there appears at present to be a strong Inclination in most European Princes for Peace, and some Overtures made that way, in order to put an end to the Division and Confusions, that have so long troubled the World.

Of the Spring Quarter,

WHICH begins on *Thursday* the 20th Day of *March* at 10 Minutes past 3 in the Morning, at which time 15 Degrees of *Capricorn* ascends, and 20 Degrees of *Scorpio* culminates. The *Moon* is in the third House applying to the *Trine* of *Mars*, *Square* of *Jupiter* and *Venus*, and to a *Sextile* of *Saturn*, *Mars* Lord of the 10th is posited in the 8th, is in *Opposition* to *Saturn* Lord of the Ascendant; *Jupiter* and *Venus* in *Conjunction* in the first, and the *Sun* and *Mercury* in the second House. Thus are the Planets at this Ingress; at the vernal new *Moon* the Aspects of the Planets among themselves are much the same; but about 10 Days preceding it, there is a Sattellitium of violent and rugged Aspects, (*viz.*) an *Oppositi* of *Saturn* and *Mars*, *Sun* and *Mars*, *Mars* and *Mercury*; also a *Conjuncti* of the *Sun* and *Saturn*, *Saturn* and *Mercury*, the *Sun* and *Mercury*. Configurations the most angry and violent that some Years have produced; which do manifest the Designs and Actions of most Nations in *Europe*, to be violent, resolute, and martial; nay! there will scarce be a Prince or State in *Europe*, but will one way or other be engaged in military Action; we may now, I fear, too justly apply to these Times the Complaint of *Erasmus*: *We war continually; Nation against Nation, City against City, Prince against Prince, &c.* and that which is most detestable of all, *Christians against Christians*. But *St Austin* saith, *It is not Sin to make War, but to abuse it.* *David was a great Warrior, and God gave him a good Testimony.* And *St Ambrose* saith, *he that maintaineth a War against bloody and barbarous Enemies is a righteous Person, for that he thereby defendeth the Weak, and such as are subject to Oppression.* Most certain it is the People of *France* yearn after Peace, as much as the parched Earth gapes after Rain. In short, we may expect this Year to hear of Discontents, Murmurings, Insurrections, and an universal Hatred betwixt the common People and their Government, with Detriment and Loss to both; as also the Motion of Armies, cruel and bloody Wars, of Houses, Lent Sedition, new Law, Year in form, and watry that by the Health and

PARTRIDGE, 1760.

bloody Wars, both by Sea Land: the sacking of Cities and Towns, burning of Houses, Depopulations, Robberies, Thefts, Plundering, and Rapes. Pesticent Seditions, and various Infirmities, new Religions, new Governments, new Law, and new Customs. Thus will things be circumstanced this Year in some foreign Nation, and in particular those passive to the earthy and watry Trigon. I heartily wish all may continue well at Home, and that by the Blessing of God we may triumph over our Enemies, and enjoy Health and a prosperous Trade.

THE Summer Quarter begins on *Saturday* the 21st of *June*, at 9 Minutes past 2 in the Morning.

THE Autumnal Quarter, begins on *Monday* the 22d Day of *September* at 41 Minutes past 3 in the Afternoon.

Concerning Comets.

AT the time of my writing this Copy, a Comet has made a visible Appearance in our System; and all Authors who have treated on the final Cause of Comets agree, that they bode great Changes and Vicissitudes in Kingdoms and States. Never yet did any Comet appear, but it was the Messenger or Declarer of some Evil; they are ordinarily the Precursors of the Death of Princes, Plague and Famine of the People, also Wars, Inundations, Earthquakes, and Tempests, all which dire Effects are summed up in the following Verses, by Dr H. M.

*When once a direful Comet spreads it's Train,
Contagious Deaths, and pining Famine reign.
Monarchs make Leagues to render Empire sure,
Sedition now keeps Gaols and Deaths in ure.
Countries are sack'd, impetuous Storms arise,
And Bodies feel unheard-of Maladies:
Slaughter grows bold, Faith seeing this expires;
And heated Clouds disclose their inbred Fires;
And now by Sympathy in Thunder groan,
Th' Earth quakes and trembles at the dismal Tone.
Heaven mourns in scorching Drought, and then again.
Despairing sweeps in lavish Showers of Rain, &c. &c.*

Of the Eclipses in 1760.

TH E R E will be four Eclipses this Year, two of the *Sun*, and two of the *Moon*; of which, three will be visible.

The first is a small visible Eclipse of the *Moon* on the 29th Day of *May* at Night, the Calculations follow from Dr *Halley's* and the *Palladium* Tables.

Beginning

P A R T R I D G E, 1760.
